Yes  No  If so, please describe.  Third-party verification results are available for the BIDA® filtration system on dairies, food processing pants, wastewater treatment plants and other application. We also have a peered review published academic article on the denitrification of dairy lagoon water

## Are there any other aspects of your business that you feel should be included in this document?

On May 16, 2018, The Innovation Center for U.S. Dairy announced its seventh annual U.S. Dairy Sustainability Award winners at the Morton Arboretum just outside of Chicago, Ill. "This year's winners showcase how a drive to be economically viable, socially responsible, and environmentally sustainable is at the heart of our dairy industry, from farm to table," said Barbara O'Brien, president of the Innovation Center for U.S. Dairy.

BioFiltro and the Royal Dairy, of Royal City, WA, received the 2018 U.S. **Outstanding Dairy Farm Sustainability award** in recognition of the millions of worms, microbes, and bacteria that dairy farmer Austin Allred has put to work. The 200,000 gallon per day BIDA® System was commissioned in August 2017 and has averaged 75% removal in Total Nitrogen, 85% removal in Total Phosphorus, and 94% removal in Total Suspended Solids from the dairy's flush water.

BioFiltro is also working with the EPA in the State of Washington and installing our BIDA system into a repurposed lagoon. This new design can lower the capital cost as much as 50%.
