

Bolinger Biogas LLC

Powering a Sustainable Future

Bolinger Biogas was founded in 2022 with the mission to build, operate, and maintain biogas facilities in the state of Indiana. We plan to leverage the numerous arrays of existing technologies in an efficient and sustainable manner. We are here to create long-lasting facilities and be the enduring business behind them long into the future. By partnering with local entities and talent, we strive to become a valuable part of every community we serve.

About the Founder

Ashton grew up in a small farming community in Indiana where his parents taught him to be a good steward of his resources. He went on to study engineering at Purdue University. During this time, he discovered existing biogas technologies could help reduce waste, all while creating sustainable energy. Biogas is the perfect fit for Ashton to pursue his passions at the intersection of Agriculture, Engineering, and sustainability.

Company Strengths

- Small and Flexible
- Agricultural Background
- Engineering Expertise
- Industry Experience

What We Do

Construction and Development

Bolinger Biogas can be your partner to bring projects from ideas to reality. We locate and consult with experts to bring each unique project into existence. We are here to manage all of the complex engineering, permitting, and potential financing options available. Bolinger Biogas doesn't do it all, instead we get the right help from the right partners. Whether you need help with a small part of your project, or want someone to execute your vision, we are here to help.

Operations Management

Biogas plants don't run themselves. Providing qualified local talent to operate facilities, Bolinger Biogas is here to partner with you in keeping an existing biogas project going. We understand our customers have their own businesses and operations to run, make biogas equipment operation one less thing you have to worry about. We believe the people, safety, and efficiency of a plant is key in delivery a valuable operation.

Maintenance

The complex nature of creating biogas leaves a lot of worn-out equipment. Help keep your operation going by employing Bolinger Biogas to perform routine maintenance and upgrade projects. We will gladly partner with your existing operation to provide additional support and expertise.
