

# Renewable Gases/Fuels

A Low Carbon Future

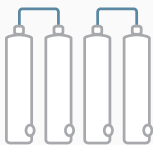

TerraVest Renewables, a division of TerraVest Industries (TSX:TVK), is a provider of integrated clean energy solutions to produce renewable natural gas from organic waste and alternative fuels from gas recovery projects.

## End to End Integrated Solutions

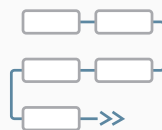

Specialists in the processing of renewable gases and fuels, TerraVest Renewables offers complete services for your project from conception to implementation. With more than three decades of experience in the renewable energy sector and having worked on more than two dozen renewable natural gas and gas recovery

projects worldwide, our highly qualified team can meet the unique needs of your project with customized plant layouts and capabilities. And with our ability to provide a single point of accountability, we can ensure the efficient delivery of reliable and robust renewable gas plants at industry-leading costs.

### Equipment Fabrication

Our vertically integrated manufacturing provides quality control, on-time delivery and cost efficiencies for equipment and components.

### Process Technologies

We offer only proven and commercial biogas upgrading technologies and practical gas recovery systems for hydrogen and other industrial gases.

### Storage & Transport

Our existing transportation infrastructure offers dependable solutions to compress, store and transport your renewable fuels and gases to its end users.

## Manufacturing & Transportation Infrastructure

We have a strong geographic reach to fabricate and ship from our facilities across North America.

## What We Bring to Your Project

We have extensive equipment fabrication capabilities and renewable gas and gas recovery project experience.

<p><b>60+ Years</b></p> <p>Facility operations to design, fabricate &amp; service high-quality gas processing equipment that meets the most demanding client specifications</p>		<p><b>30+ Years</b></p> <p>Combined team experience in engineering design, project management, equipment procurement/fabrication/install, commissioning and ongoing technical support for RNG plants</p>	<p><b>22</b></p> <p>Vertically integrated manufacturing facilities to offer equipment cost efficiencies</p>
<p><b>2,500+</b></p> <p>Employees across North America to ensure timely project delivery</p>	<p><b>25+</b></p> <p>RNG projects our team has worked on: WWTP, agriculture, landfills &amp; municipal organic waste</p>	<p><b>100+ Years</b></p> <p>Process engineering, project management, optimization and troubleshooting of large scale oil &amp; gas and petrochemical projects</p>
